DAILY QUIZ · 11 NOVEMBER 2026 · 5 MIN READ

Argon 18 Krypton

Today's product is the Argon 18 Krypton in Blue. This brief is the staff pitch sheet in short form. Read it, then take the quiz.

Open with this

"It's a race-bred carbon bike that's built to be comfortable for long rides." Then put the customer on the bike. The fit adjustment sells itself on a test ride.

The bike in six lines

- **3D+ head tube**: three fit heights on every size, 0, 15 and 30 mm.
- **Full carbon** with Argon 18's TCS layup for comfort.
- **Clearance for 38 mm tyres.** That is the limit on our units.
- **In-frame storage** in the down tube.
- **Shimano 105** groupset with disc brakes.
- **Sizes XS, S, M, L**, each with its own geometry.

Six reasons to pick the Krypton

- **Fit you can change after you buy it.** A beginner starts with the front end tall and relaxed and goes lower as flexibility improves. No new bike and no cut steerer. Use it when they ask, "Is a road bike too aggressive for me?"
- **Comfortable, but not slow.** The TCS carbon layup soaks up road buzz while the frame stays stiff. Smooth on broken Pune roads, still sharp on a Sinhagad climb.
- **Sized properly for every rider.** The Argon Fit System gives each size its own geometry, so small riders get the same handling as tall ones. Good for women and shorter riders who were told to "just take the XS".
- **Proven pro heritage.** The design drew on Astana Pro Team's Paris-Roubaix experience, the roughest race in pro cycling. BikeRadar named the Krypton CS a Bike of the Year in 2018.
- **Built for long, rough days.** 38 mm tyres for broken roads and light gravel. The in-frame storage holds tools and a spare tube, so no saddle bag. Brevets, ghat climbs, weekend 100s.
- **Rare on Pune roads.** A Canadian specialist brand, for buyers who do not want another Trek, Giant or Merida.

Builds and prices

BUILD	GROUPSET	WHEELS	PRICE	WHO IT SUITS
Frameset	–	–	₹1,25,000	Custom builders, upgraders
Entry	105 11-speed	Shimano RS171 alloy	₹1,74,999	First carbon road bike
12-speed	105 12-speed	Shimano alloy	₹1,99,999	Wants the latest groupset

12-speed + Vision	105 12-speed	Vision TC 30 alloy	₹2,10,000	Better wheels, same budget band
Carbon wheels	105 11-speed	3T carbon	₹2,19,999	Wants the fast look and feel
Krypton CS	105 mechanical	–	₹2,05,000	Silver / Cosmos Grey, XS only

All Blue builds: Krypton carbon frame, sizes XS to L, Token bottom bracket, Prologo Proxim saddle.

Upsell path: 105 11-speed alloy, then 105 12-speed, then carbon wheels. Wheels change the ride feel the most, so suggest the wheel upgrade first.

Handling objections

- **"I've never heard of Argon 18."** They are a Canadian specialist with Tour de France and Ironman history. You are paying for engineering, not a big marketing budget.
- **"Why not a Domane?"** Both are excellent. The Krypton's adjustable front end lets the fit change as the rider improves, and it is far less common on the road.
- **"Is 105 good enough?"** Yes. It is the groupset most serious amateurs ride. If they want more, upgrade the wheels first.

Do

- Ask about their riding: distance, routes, flexibility.
- Open the storage hatch and show what fits inside.
- Set the 3D+ spacer on the test ride: try 0 mm, then 15 mm.
- Show the frameset price to custom builders and upgraders.

Don't

- Promise tyres wider than 38 mm.
- Let them leave without a test ride.
- Quote a build without checking size availability first.
- Run down other brands. Sell the Krypton's strengths.

Close the sale

"Let's set the 3D spacer on a test ride. You'll feel the difference between 0 and 15 mm in five minutes."

Remember these

- Open: race-bred carbon, built to be comfortable for long rides. Then the test ride.
- 3D+ head tube: 0, 15, 30 mm. 38 mm tyres is the limit. Storage in the down tube.
- Frameset ₹1,25,000. Complete builds ₹1,74,999 to ₹2,19,999. Krypton CS ₹2,05,000, XS only.
- Check size availability before quoting. Never run down other brands.
