Wahoo ELEMNT BOLT 3

Today's second product is the Wahoo ELEMNT BOLT 3, a compact GPS bike computer. We are an authorised Wahoo dealer. Our listed price is ₹36,999. Check the site before you quote.

What it is

A small, aerodynamic GPS computer for the handlebar. It records the ride, shows speed, distance, heart rate and power from paired sensors, and guides the rider along a route.

Key specs

SPEC	DETAIL
Display	2.3 inch high-resolution TFT colour display with anti-glare coating
Battery	Up to 20 hours. It varies with settings, connected sensors and navigation use.
Connectivity	Bluetooth and Wi-Fi, plus sensor connectivity
Charging	USB-C
Start-up	Ready-To-Ride Dashboard for faster pre-ride setup

Navigation

- **On-device smart navigation** with turn-by-turn guidance and rerouting.
- **Back on Track**: guides the rider back to the route after a wrong turn.
- **Route to Start**: guides the rider to where the route begins.
- **Retrace Route**: takes the rider back the way they came.
- Routes can be imported directly from **Google Maps and Apple Maps**.
- **SUMMIT climb features** show upcoming climbs, even without a preloaded route.
- **Strava Live Segments** for chasing personal records.

Training and control

- Multiple workout profiles: Road, Gravel, Indoor and more.
- Structured workouts imported from over 100 training platforms.
- Custom alerts based on time or distance, useful for eat and drink reminders.
- Controls Spotify, Apple Music, compatible bike lights, radar devices and GoPro from the computer.
- Works with the Wahoo ecosystem: sensors, KICKR trainers and ride data.

In the box

- ELEMNT BOLT computer
- Out-front handlebar mount, 31.8 mm

- Stem mount
- USB-C charging cable
- Safety tether
- Zip ties

Sensors are not in the box. Heart rate strap, speed and cadence sensors and power meters are separate sales.

Who it is for

Road, gravel, indoor training, racing and endurance riding. The clearest fit is a rider who wants navigation and training data in a small, simple unit.

How to sell it

- Ask what they want from a computer: just speed and distance, navigation, or training with heart rate and power.
- If they own a Wahoo KICKR trainer, the BOLT fits straight into the same ecosystem.
- For brevet riders, be honest about battery: up to 20 hours covers a 200 km or 300 km brevet, but a 400 km or 600 km ride needs a power bank.
- Check the handlebar. The out-front mount is for a 31.8 mm bar. Aero or integrated cockpits may need a different mount, so look before you promise.
- Offer the add-ons with it: heart rate strap, speed and cadence sensors, a radar or light, and a case or screen protector.

Remember these

- 2.3 inch colour display, up to 20 hours of battery, Bluetooth and Wi-Fi, USB-C.
- Navigation: Back on Track, Route to Start, Retrace Route, routes from Google Maps and Apple Maps.
- SUMMIT shows climbs without a preloaded route.
- Box has two mounts but no sensors. Check the handlebar before promising the mount.
