What a frameset is and what the customer still needs

A frameset is the frame and fork, sold without the parts that make it rideable. Customers buy one to move parts over from their current bike, or to build a dream bike part by part.

What is usually in the box

- Frame, fork and headset.
- Usually the seatpost, because many frames need their own shape.
- Sometimes the handlebar or full cockpit. The listing says so, for example "with Handlebar" or "with Cockpit". Read it before you answer.

What the customer still has to buy

Groupset, wheels, tyres, saddle, bottom bracket, bar tape, pedals, and often the handlebar and stem. These can cost as much as the frameset again. Say this early so the budget is real.

Compatibility checks before taking money

CHECK	WHY IT MATTERS
Disc or rim brake	Rim brake groupsets and wheels do not fit a disc frame, and the other way round. We list both kinds.
Bottom bracket	Each frame takes one standard. Trek uses T47 threaded, Cervélo uses BBright, Pinarello uses Italian threaded, current Merida Reacto and Scultura use BB86 press-fit. The customer needs the bottom bracket that fits both the new frame and their crank, so a bottom bracket from the old bike usually cannot move over.
Shifting type	Some top aero frames take electronic shifting only. Check the spec sheet before moving a mechanical groupset over.
Seatpost and cockpit	Many are specific to that frame. A standard round post or any stem may not fit.
Tyre clearance	The widest tyre the frame accepts.

Size is final

You can change a stem. You cannot change the frame size. Get the customer measured, or book a bike fit, before ordering. The fork steerer is cut to height during the build and cannot be made longer again, so cut it only after the position is settled.

Stock

Many framesets we list are held by the vendor, not in our stores. Confirm the size is in stock and the lead time before you take payment.

Remember these

- Frameset means frame, fork and headset. Read the listing for seatpost and cockpit.
- The rest of the build can cost as much as the frameset again.
- Check brake type, bottom bracket, shifting type and seatpost before selling.
- Confirm size with a fit, and confirm vendor stock, before taking payment.
