The Trek road ladder

We are the authorised Trek dealer for Pune, so every one of us should be able to walk a customer up the Trek range without looking it up.

How a Trek name works

- **Family**: Domane is endurance. Madone is race. Checkpoint is gravel.
- **Letters**: AL is aluminium, SL is carbon, SLR is top carbon.
- **Number**: the parts level. Higher number, better groupset and wheels.
- **Gen**: the frame generation. Gen 4 is newer than Gen 3.

Domane (endurance)

MODEL	FRAME	GROUPSET	LISTED FROM
Domane AL 2	Aluminium	Shimano Claris	₹98,699
Domane AL 4	Aluminium	Shimano Tiagra	₹1,45,999
Domane AL 5	Aluminium	Shimano 105	₹1,79,999
Domane SL 5	Carbon	Shimano 105	₹2,34,999
Domane SL 6	Carbon	Shimano 105 Di2	₹2,79,199

The carbon Domane SL has **IsoSpeed** at the seat tube, which lets the seat tube flex to take the sting out of rough roads. The aluminium Domane AL does not have IsoSpeed. A model with AXS in the name, like Domane SL 6 AXS, uses SRAM Rival AXS instead of Shimano.

Madone (race)

MODEL	FRAME	GROUPSET	LISTED FROM
Madone SL 5	Carbon	Shimano 105 mechanical	₹3,20,199
Madone SL 6	Carbon	Shimano 105 Di2	₹4,35,499
Madone SL 7	Carbon	Shimano Ultegra Di2	₹5,51,199
Madone SLR 7	Top carbon	Shimano Ultegra Di2	₹7,77,299

The Madone Gen 8 has **IsoFlow**: the opening under the saddle where the seat tube splits. It improves airflow, saves weight and adds some comfort. SL 7 and SLR 7 share the groupset. The extra money for SLR buys the lighter top-grade carbon frame.

Two things to say to every Trek customer

- Trek frames carry a lifetime warranty for the first owner. Register the bike in the customer's name.
- Many Trek bikes are ordered in from Trek and are not on our floor. Check availability before you promise a delivery date.

Remember these

- Domane is endurance, Madone is race, Checkpoint is gravel.
- AL 2 Claris, AL 4 Tiagra, AL 5 105. Then carbon starts at SL.
- IsoSpeed is on the carbon Domane. IsoFlow is on the Madone.
- Confirm Trek availability before promising a date.
